Renal Medicine

Thursday 30 April 2026

09:00 – 17:00

Online

Join us for our comprehensive RCPE Renal Medicine Symposium, where leading clinicians and researchers will explore the most relevant and rapidly evolving areas of nephrology practice.

From truly personalised kidney care and real-world application of evidence-based medicine, to compassionate end-of-life conversations, the morning sessions set the stage for deeper understanding of what matters most to patients. The programme then tackles key shared challenges between primary and specialist care. The final session brings practical insights into genetic testing, the latest in PKD management, and navigating complexities in glomerulonephritis clinics.

With expert speakers and a programme designed to enhance both clinical expertise and patient-centred practice, this is an event not to be missed for anyone involved in renal care.

Sessions will focus on:

- Recurrent UTIs
- Integrated CKD management
- Cutting-edge updates on cardiometabolic issues
- GLP-1 therapies, and bariatric referral in renal patients
- Polycystic kidney disease (PKD)

All grades of medical, nursing, allied health professionals and medical students are welcome. This is an event not to be missed for anyone involved in renal care.

Catch up will be available to registered delegates until 28 days following the live event and full details are available on the website.

CPD +6*
