Royal College of Physicians of Edinburgh

Dermatology

Friday 12 December 2025

13:00 – 17:00

Online

Healthcare and public expectations are changing and we hope this new course will stimulate thought and conversation with topics ranging from how Melanoma incidence continues its inexorable rise, but how much is real and how much might be overdiagnosis? Will Artificial Intelligence or sunlight avoidance solve it for us? How concerned should we be about the treatments we offer to our patients?

Topics will include:

- Melanoma diagnosis and overdiagnosis
- Pigmented Lesions - the role of AI
- Redefining the risk-benefit balance of sunlight
- When a rash is more than skin deep: identifying life-threatening drug hypersensitivity reactions
- Topical steroid withdrawal syndrome
- Red legs

Designed for a broad audience—including dermatologists, generalists, trainees, GPs, Allied health professionals, and students.

Register online for live attendance or catch-up for 28 days post event.
